

BILTFLOW

Final Hero Film

Locked Production Master — Voiceover + Exact Screen Direction

Runtime	2:30 – 2:45
Format	16:9 master, designed with safe areas for derivative formats
Audience	Builders, developers, construction executives, CFOs, COOs and investors
Status	Locked — Final Copy

BILTFLOW — FINAL HERO FILM

Locked Production Master — Voiceover + Exact Screen Direction

Target runtime: 2:30-2:45

Format: 16:9 master, designed with safe areas for derivative formats

Audience: Builders, developers, construction executives, CFOs, COOs and investors

PART ONE — 90 YEARS OF CONSTRUCTION

0:00-0:30

The opening should feel like a film before it feels like a technology advertisement.
No Biltflow branding should appear until the reveal.

SCREEN 01 — 0:00-0:03

1930s — THE BEGINNING

FULL SCREEN

Use the iconic Lunch Atop a Skyscraper (1932) image.
Crop wide enough that we see:

- * workers
- * steel beam
- * extreme height
- * New York below

Black-and-white.
Very subtle film movement/parallax if required.
Do NOT put the image inside a frame.

SCREEN LAYOUT

Top-left, very small:
1932

No other graphic elements.

AUDIO

Wind.
Distant city.
Subtle steel/construction sounds.
No music yet.

NARRATOR

"Construction has always built the world."

SCREEN 02 — 0:03-0:06

1940s/50s — OLD HOLLYWOOD

FULL SCREEN

Priority reference:
How High Is Up? — The Three Stooges
Alternative:
Mr. Blandings Builds His Dream House — Cary Grant
Find a shot where construction is immediately obvious:

- * structural steel
- * workers
- * physical plans
- * tools
- * manual coordination

Do not choose a close-up where the construction environment cannot be seen.

SCREEN

Small top-left:
1940s / 50s

NARRATOR

"Different era. Same industry."

TRANSITION

Hard cinematic cut.
No dissolves.

SCREEN 03 — 0:06-0:09

1970s/80s — THE JOBSITE

FULL SCREEN

Begin with approximately 1 second of old-school construction culture:

workers talking, waiting, carrying plans, calling instructions.

Then cut directly to:

THE MONEY PIT — 1986

Priority: find a recognisable Tom Hanks/construction sequence where the project is visibly chaotic.

Trades everywhere.

Unfinished work.

Something going wrong.

SCREEN COPY

Briefly appear:

BIGGER PROJECTS.

Then:

SAME PROBLEMS.

NARRATOR

"Bigger projects. Same problems."

Do not overplay the comedy.

The audience should smile in recognition, not feel like they're watching a meme.

SCREEN 04 — 0:09-0:12

1990s/2000s — MORE MOVING PARTS

Three or four extremely fast cuts:

PHONE

→

FAX

→

PAPER DRAWINGS

→

SITE OFFICE

Then transition into:

CASINO ROYALE — 2006

Use the Madagascar construction sequence.

Choose a WIDE construction shot rather than simply a close-up of Daniel Craig.

Ideally we see:

- * Bond
- * workers
- * steel
- * scaffolding
- * crane
- * active construction

NARRATOR

"More people. More paperwork. More moving parts."

AUDIO

This is where the soundtrack starts building momentum.

SCREEN 05 — 0:12-0:15

2010s — LOCKE

FULL SCREEN

Locke — 2013

Tom Hardy on the phone.

Use rapid cuts between two or three calls if available.

The significance of this scene is that his character is coordinating a major concrete pour remotely.

NARRATOR

"Technology changed how we communicated."

AUDIO

Phone ring.

Call connection.

Another ring.

Music continues building underneath.

SCREEN 06 — 0:15-0:18

TODAY — A WORKING MAN

FULL SCREEN

A Working Man — 2025

Jason Statham as construction foreman Levon Cade.

This should be one of the most recognisable shots in the opening.

Find a WIDE or MEDIUM-WIDE frame showing:

Jason Statham + hard hat + workers + real construction environment.

Ideally he is:

- * walking the site
- * directing work
- * checking progress
- * reviewing plans
- * dealing with a site issue

SCREEN

Small top-left:

TODAY

NARRATOR

"But the way construction operates?"

Short beat.

"Not enough."

Do not add unnecessary text.

Let Statham and the construction environment carry the screen.

SCREEN 07 — 0:18-0:22

2026 — TECHNOLOGY OVERLOAD

This is one of the most important designed sequences.

We leave Hollywood.

Start with ONE clean modern construction screen.

Then progressively introduce:

Aconex

Procore

Jobpac

ProcurePro

Payapps

Buildsoft

Bluebeam

CostX

Excel

Outlook

Teams

WhatsApp

Then information begins arriving:

RFI 127 — OVERDUE
VARIATION — APPROVAL REQUIRED
DRAWING REVISION RECEIVED
PROGRAM UPDATE
PROCUREMENT DELAY
COST REPORT
COMPLIANCE ITEM
SUBCONTRACTOR QUERY
EMAIL — 38 UNREAD
WHATSAPP — 17 MESSAGES

Everything overlaps.
Notifications accelerate.
Windows multiply.
The screen should become intentionally uncomfortable.

IMPORTANT
Do NOT arrange the logos beautifully.
This is not an integration diagram.
It is fragmentation.

NARRATOR
"More software."

CUT.
"More data."

CUT.
"More complexity."

SCREEN COPY
At peak chaos:

LESS CLARITY.

SOUND
Email.
Teams.
Phone.
WhatsApp.
Radio.
Keyboard.
Site noise.
Notification.
Another notification.
Music reaches maximum tension.
Then—

SCREEN 08 — 0:22-0:23

HARD CUT TO BLACK.
Every sound stops simultaneously.
No music.
No logo.
No animation.
No glow.
Pure black.
Hold.

SCREEN 09 — 0:23-0:24.5

Black.
Centred:
THE TOOLS CHANGED.

White typography.

Nothing else.

SCREEN 10 — 0:24.5-0:26

Replace with:

**THE WAY CONSTRUCTION
OPERATES DIDN'T.**

Hold.

SCREEN 11 — 0:26-0:27

Black again.

Silence.

Then:

UNTIL NOW.

SCREEN 12 — 0:27-0:30

BILTFLOW REVEAL

Biltflow wordmark emerges cleanly.

Do not over-animate it.

No explosion.

No futuristic particles.

No unnecessary 3D.

SCREEN

BILTFLOW

Underneath:

THE AI-NATIVE OPERATING SYSTEM FOR CONSTRUCTION.

NARRATOR

"Meet Biltflow."

Music begins again — but completely different.

Controlled.

Modern.

Confident.

The audience should FEEL that we've moved from chaos into control.

PART TWO — THE BILTFLOW STORY

SCREEN 13 — 0:30-0:45

ONE CONTINUOUS FLOW

The Biltflow logo transitions directly into the REAL platform.

No generic technology animation.

Camera enters Biltflow.

PRODUCT NAVIGATION

A horizontal lifecycle begins building:

SITE SOURCING

FEASIBILITY

APPROVALS

DESIGN

ESTIMATING

PROCUREMENT

COMMERCIAL

CONSTRUCTION

COMPLIANCE

HANDOVER

DEFECTS

MAINTENANCE

LEARNING

A single line connects everything.

As the camera travels along the lifecycle, briefly reveal the actual Biltflow module underneath each stage.

NARRATOR

"Biltflow connects the entire construction lifecycle — projects, people, workflows and data — in one intelligent operating system."

Camera continues.

"From the first site opportunity, through feasibility, approvals, design, estimating, procurement, commercial and construction, to handover, defects, maintenance and operations —"

Lifecycle completes.

"one continuous flow of intelligence across the entire development lifecycle."

SCREEN 14 — 0:45-0:57

START ANYWHERE

Pull back.

Now show the lifecycle modularly.

Select:

PROCUREMENT

It activates independently.

Then add:
COMMERCIAL

Then:
CONSTRUCTION

Then progressively activate the complete lifecycle.

LEGACY INTEGRATION

Show one existing platform connecting into Biltflow through an API/connector.

Then show another.

Do NOT make competitor logos look inferior or broken.

Message:

BILTFLOW WORKS WITH YOUR EXISTING STACK.

Then demonstrate a legacy module being replaced by a native Biltflow module.

NARRATOR

"You don't have to start with everything."
"Start with one module. Add more when you're ready. Or bring the entire lifecycle together."
"Keep the systems that work. Connect them through Biltflow. Progressively replace what you no longer need."

SCREEN COPY

START ANYWHERE.
CONNECT EVERYTHING.

SCREEN 15 — 0:57-1:15

BUILT ON REAL CONSTRUCTION

This needs to feel extremely credible.

No generic AI visuals.

Use REAL construction information.

SCREEN SEQUENCE

Data relationships begin connecting between them.

Then pull back.

SCREEN

Large:

\$5B+

Underneath:

REAL HIGH-DENSITY RESIDENTIAL CONSTRUCTION PROJECT DATA

NARRATOR

"AI is being added everywhere. But adding a generic AI model to old software doesn't make it construction-intelligent."

Beat.
"Biltflow wasn't built that way. It was built AI-native from the ground up —"
\$5B+ appears.

"trained on real-world data from more than five billion dollars of high-density residential construction projects."

Show:

DRAWINGS

COSTS

CONTRACTS

PROGRAMMES

DELIVERY

COMPLIANCE

connecting.

"Drawings, costs, contracts, programme, delivery, compliance — connected into one intelligence layer."

Then:

"So Biltflow isn't learning construction from theory. It's learning from the reality of delivering complex projects."

Hold.

"Not just what happened."

Beat.

WHY.

SCREEN 16 — 1:15-1:32

MEET EVE

Do NOT create a humanoid AI character.

EVE exists INSIDE the Biltflow UI.

She should feel like intelligence rather than a cartoon assistant.

Use:

- * subtle waveform
- * EVE indicator
- * voice interface
- * text interaction
- * project intelligence moving around her

EVE

"Hi. I'm EVE."

Dashboard responds.

"I understand what's happening across your projects, what needs your attention, and what needs to happen next."

NARRATOR

"EVE is Biltflow's intelligence and orchestration layer — connecting information, coordinating workflows, directing a workforce of specialist AI agents."

EVE

"You stay in control. Or, within your approved workflows, I can take action."

UI CONTROL

Real product-style slider:

COPILOT —● AUTOPILOT

The control changes.

Immediately show a workflow executing.

This is important.

Don't simply tell us autopilot exists.

SHOW IT DOING SOMETHING.

SCREEN 17 — 1:32-1:48

THE DIGITAL WORKFORCE

EVE pulls back.

Around EVE appear specialist agents.

Do NOT make this look like Marvel characters.

Keep them within one consistent enterprise UI.

Show:

TANGO
PROCUREMENT INTELLIGENCE

Tango highlights:

3 PROCUREMENT OPPORTUNITIES

TANGO
"I've identified three procurement opportunities that need action."

Tango sends the tasks to Cash.

Visual connection moves across.

CASH
PROCUREMENT EXECUTION

Cash begins:

Supplier shortlist.

RFQ issued.

Follow-up.

Responses received.

Comparison.

Recommendation.

CASH
"I've got them. I'll engage the right suppliers, manage the follow-up, and keep everything moving."

Pull back.

Reveal more specialist agents.

Examples:

Commercial

Compliance

Design

Cost

Programme

Safety

Handover

Defects

Maintenance

NARRATOR
"From feasibility to procurement, commercial to compliance."
"Not disconnected AI tools."

Beat.

ONE COORDINATED DIGITAL WORKFORCE.

SCREEN 18 — 1:48-2:04

THE BUILDING TALKS BACK

Visual tone becomes warmer.

Completed residential building.

Residents.

Finished lobby.

Completed apartments.

Then:

A maintenance/defect issue enters Biltflow.

Example:

WATERPROOFING ISSUE — LEVEL 08

Sophia activates.

SOPHIA

"We've seen this issue before."

The defect begins travelling BACKWARD:

DEFECT

INSTALLATION

SUBCONTRACTOR

PRODUCT

SUPPLIER

PROCUREMENT

DESIGN

NARRATOR

"Sophia is Biltflow's Maintenance and Defects Agent — connecting defects and DLP issues back to the decisions that came before."

SOPHIA

"I've traced it back to the original design, product and installation."

NARRATOR

"From the defect, back through supplier, procurement and design."

"Connecting what happened to why it happened."

SCREEN 19 — 2:04-2:12

THE NEXT PROJECT ALREADY KNOWS

Now reverse direction.

Take that knowledge from Project A.

A single information stream travels into:

PROJECT B

New feasibility.

New design.

New procurement package.

The problematic decision is automatically flagged BEFORE it happens again.

NARRATOR

"And then that intelligence flows forward — into the next design, the next estimate, the next supplier decision."

SOPHIA

Hold for a fraction of a second.

"The next project already knows."

THIS LINE SHOULD HAVE SPACE.

Do not immediately speak over it.

SCREEN 20 — 2:12-2:25

THE COMPOUNDING ADVANTAGE

Show:

PROJECT 01

→ PROJECT 02

→ PROJECT 03

→ PROJECT 04

Each project adds intelligence into the Biltflow knowledge layer.

Avoid a generic exponential graph if possible.

Better:

Show the actual organisational knowledge base physically becoming richer.

NARRATOR

"Every building creates knowledge. Biltflow remembers it."
"Every project creates lessons. Biltflow learns from them."
"Every development makes the next one smarter, faster, with fewer repeated mistakes."

Then:
"That's leverage no single hire — or single system — can give you."

SCREEN 21 — 2:25-2:37

THE HUMAN CLOSE

Return to humans.
Site Manager.
Project Manager.
Contracts Manager.
Design Manager.
Developer.
Construction Director.
People using Biltflow naturally.
No staged smiling-at-camera stock footage.
Real working environments.
Subtle Biltflow UI in the background.

NARRATOR

"This isn't about replacing construction expertise."
Show experienced construction professional.
"It's about amplifying it —"
Show Biltflow supporting the person.
"giving your people the intelligence, automation and digital workforce to do more, while preserving what your organisation learns along the way."

SCREEN 22 — 2:37-2:40

EVE

Return to the interface.
Minimal.

EVE

"Ready for the next project?"
Small pause.

SCREEN 23 — 2:40-2:45

FINAL BRAND

Logo begins forming.

NARRATOR

"Build. Learn. Improve. Repeat."
Logo completes precisely as narrator says:
"Biltflow — the AI-native operating system for high-density residential development and construction."

FINAL FRAME

Hold longer than the editor instinctively wants to.
Approximately 3 seconds minimum.

CENTRE

BILTFLOW

BELOW

THE AI-NATIVE OPERATING SYSTEM FOR

HIGH-DENSITY RESIDENTIAL DEVELOPMENT + CONSTRUCTION

Then:

BUILD. LEARN. IMPROVE. REPEAT.

Then:

BILTFLOW.COM

Bottom corner, very subtle:

POWERED BY EVE

NO App Store badge.

NO Google Play badge.

NO extra buttons.

NO QR code unless there is a specific campaign requirement.

The URL is the CTA.

CRITICAL PRODUCTION RECOMMENDATIONS

1. THE HOLLYWOOD FOOTAGE MUST BE REAL

Do not AI-generate fake versions of:

Tom Hanks

Daniel Craig

Tom Hardy

Jason Statham

The recognisability is precisely what makes the concept work.

Use properly licensed movie footage or replace individual shots with cleared archival footage if licensing becomes commercially unreasonable.

2. DO NOT PUT LARGE TEXT OVER EVERY HOLLYWOOD SHOT

The footage should breathe.

The narrator tells the story.

Decades can appear subtly in the corner.

The big typography is reserved primarily for:

LESS CLARITY.

THE TOOLS CHANGED.

THE WAY CONSTRUCTION OPERATES DIDN'T.

UNTIL NOW.

BILTFLOW.

This gives those words much more power.

3. BILTFLOW MUST FEEL DIFFERENT

Before Biltflow:

grain

noise

people shouting

phones

paper

movement

fragmentation

Hollywood

chaos

After Biltflow:

precision

space

clarity

real UI

controlled movement

connected information

intelligence

The viewer should understand the product emotionally before understanding it technically.

4. NEVER FAKE PRODUCT CAPABILITY

Every Biltflow interaction shown after 0:30 should either:

exist today, or

be clearly designed as a near-term product interaction that the engineering/product team has approved.

Do not create impossible futuristic UI simply because it looks good.

5. SHOW ACTION, NOT DASHBOARDS

The biggest danger after the Hollywood opening is falling into two minutes of dashboards.

Whenever possible show:

Biltflow finding something.

Biltflow connecting something.

Biltflow flagging something.

EVE making a decision.

Tango identifying an opportunity.

Cash executing.

Sophia tracing an issue.

A workflow completing.

A future project avoiding an old mistake.

The film is about an operating system that acts, not another place to look at information.

6. \$5 BILLION SHOULD BE A HERO MOMENT

Do not bury this inside a paragraph.

Visually stop for:

\$5B+

Then:

REAL CONSTRUCTION PROJECT DATA

It is one of Biltflow's strongest credibility signals.

7. "THE NEXT PROJECT ALREADY KNOWS."

Treat this as a second hero line.

The first hero idea is:

THE TOOLS CHANGED.

THE WAY CONSTRUCTION OPERATES DIDN'T.

UNTIL NOW.

The second is:

THE NEXT PROJECT ALREADY KNOWS.

These two ideas should be what people remember after the film.

8. MUSIC

Do not use generic inspirational corporate music.

0:00-0:09: almost entirely environmental sound.

0:09: rhythmic tension begins.

0:18: intensity increases significantly.

0:22: absolute silence.

0:27: completely new musical identity begins with Biltflow.

From there, sophisticated electronic/cinematic pulse.

Not aggressive.

Not "AI futuristic."

Build gently through EVE/Tango/Cash.

Reduce dramatically for Sophia.

Begin emotional build during "The next project already knows."

Peak emotionally during the human close.

Resolve cleanly underneath the final logo.

9. SOUND DESIGN MATTERS AS MUCH AS MUSIC

Historical construction:

steel

hammering
cranes
wind
radios
phones
fax machines
Technology overload:
email
Teams
WhatsApp
radio
calls
keyboard
notifications

Then:
NOTHING.

That silence before Biltflow should feel almost uncomfortable.
After Biltflow, sounds become controlled and purposeful:

one click
one confirmation
one workflow completion
one subtle EVE tone

The sound design itself tells the story:
NOISE → SILENCE → SIGNAL.

THE TEST

Before approving the film, show it to someone who has never seen Biltflow.
Then ask them only three questions:

1. What problem does Biltflow solve?

They should answer:

"Construction uses too many disconnected processes, systems and sources of information."

2. What makes Biltflow different?

They should answer:

"It connects the whole construction lifecycle and uses construction-trained AI agents to understand and act across it."

3. What line do you remember?

Ideally:

"The tools changed. The way construction operates didn't."

or

"The next project already knows."

If they cannot answer those three questions after one viewing, simplify the film rather than adding more explanation.
